

PRODUCT HANDLING & PLACEMENT

There are several methods to efficiently handle Insulated Concrete Forms. Every ICF block manufacturer bundles their product differently, but they are all conducive to ease of transportation and movement of the materials.

- The ICF forms are bundled together for easy handling.
- Unloading can be accomplished manually or using alternate lifting equipment.

- Most bundles of ICF block can be handled by one or two people quite easily.

When ICF forms are unloaded, it is recommended to measure forms to determine uniform length and height. It is suggested to occasionally measure and check the blocks prior to installation. In the unlikely event that forms are out of spec, be sure to contact your ICF distributor immediately.
